Slide 1

Administrivia

- Homeworks 1 and 2 graded. Scores on programming problem(s) e-mailed. Updated (non-draft) solutions on Google Drive. Scores on Homework 2 overall not good.

  A little advice with regard to homeworks: Turning in *something* is almost always better than turning in nothing. Showing your work (or otherwise explaining your answer) can help you get partial credit.

- If you're concerned about your overall grade, be advised that:

  I do "curve" grades, and there will almost certainly be an opportunity to get some extra-credit points at the end of the semester.

  Right now about half of your grade is the midterm, which you don't know about yet. (Soon I hope!)

- Reminder: Homework 3 due today. (Questions?)

- Quiz 4 moved to next Tuesday.

Slide 2

Single-Cycle Implementation — One More Thing

- In our initial list of instructions to implement we included `j`. But nothing in the design discussed so far (Figure 4.17) implements it.

- How to extend? Figure 4.24.

Minute Essay

- Are you okay with only having five quizzes? I would still drop the lowest score.
