Stats and the Job-Shop

1/28/2009

Opening Discussion

- What did we talk about last class?

Code

- Let's go look at the code after the revisions that I made and put in some statistics.

The Job-Shop

- Imagine a manufacturing system that has multiple stations, each of which has one or more machines that can do the work required at that station.

- Products would move from one station to the next.

- It is basically a sequence of multiserver queues.

More Advanced Simulation

- I want us to implement one of the more advanced simulations that was introduced in chapter 2.

Minute Essay

- What questions do you have about the code that we have written to date?

- The first quiz is on Friday.
