1 Course description

Currently our curriculum’s programming sequence is taught in fairly abstract languages (Scala for the first two semesters, then C++). While this has advantages, it also means that students may not develop an understanding of what is happening in the machine. This course is intended to expose students to concepts closer to the machine — programming in a not-so-abstract language, command-line tools, and the basics of data representation and computer arithmetic — and also to ease the transition from Scala to C++.

Course goals

- Basic knowledge of the C programming language and Linux/UNIX command-line development tools.
- Basic understanding of machine arithmetic and representation of data.

Course topics

- Basics of C programming, with a focus on how it differs from programming in higher-level languages such as Scala, Python, and Java.
- The Linux/UNIX command-line environment and command-line tools relevant to program development.
- Basics of data representation and computer arithmetic.
- More advanced topics as time permits (e.g., multithreaded programming with OpenMP, full-screen text-based programming with the ncurses library, etc.).

2 Basic information

Class meeting times and location

- W 12:30pm – 1:20pm, CSI 257

Prerequisites

- CSCI 1311, CSCI 1320, or consent of instructor.

Instructor contact information

- Dr. Berna Massingill
- Office: CSI 270J (not really applicable this semester)
- Office phone: (210) 999-8138
- E-mail: (Use the address TMail has for me.)
Office hours

This semester I plan to have virtual office hours, either via Zoom or the department’s Gather space. Details, including times, can be found on my home Web page http://www.cs.trinity.edu/~bmassing. If none of the listed times work for you, please get in touch by e-mail and we can negotiate about other options.

Also, e-mail is almost always a good way to reach me (really probably the best way); I normally check it fairly often and reply to student questions as promptly as I can. To help me do that, use a subject line with the word “question” and something that identifies the course. Like a lot of people these days, I get a lot of e-mail, and you don’t want messages that are important to you — and to me — to get lost in the clutter!

3 Course materials

Web site

Most course-related information (this syllabus, homework and reading assignments, etc.) will be made available via the course Web site. You can find it linked from my home page http://www.cs.trinity.edu/~bmassing (which is usually easy to find with a Web search on my full name) or directly at http://www.cs.trinity.edu/~bmassing/Classes/CS1120_2021fall/HTML/; there is also a link in TLearn. A request: If you spot something that doesn’t seem right, such as a broken link, please tell me about it!

Textbook

(Not required, but recommended if you want something more complete than the online tutorial.)

Other references

There are many books on the C language, some more reliable than others. Here are two that seem good to me.

*Note* that there’s also a lot of information about C on the Web, some of it quite good but some very much not. Use more caution than usual!

4 Course requirements

Grading

Grades in this course will be determined by scores on several homework assignments, quizzes on video lectures, and class attendance, weighted as follows.
Numeric grades will be calculated as a simple percentage, by dividing total points earned on the above components by total perfect-score points. These numeric grades will then be converted to letter grades in a way that takes into account the performance of all students, but in no case will the resulting letter grades be worse than you would receive based on the following scheme.

<table>
<thead>
<tr>
<th>Numeric grade</th>
<th>Letter grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>90 – 100</td>
<td>A-/A</td>
</tr>
<tr>
<td>80 – 89</td>
<td>B-/B/B+</td>
</tr>
<tr>
<td>70 – 79</td>
<td>C-/C/C+</td>
</tr>
<tr>
<td>60 – 69</td>
<td>D/D+</td>
</tr>
<tr>
<td>0 – 59</td>
<td>F</td>
</tr>
</tbody>
</table>

Homework assignments

Homework, in the form of programming assignments, is a crucial part of this course; most of what you learn will likely be learned in the course of completing these assignments. Detailed requirements will be provided as part of each assignment; due dates will be announced via the course Web site. For programming assignments, you are encouraged to use the department's network of Linux machines, including ITS's new Linux virtual desktop, since everything you need is installed there, and that’s the environment in which I test. However, unless otherwise specified for individual assignments, you may use any other system that provides a suitable environment.

Note that every assignment asks you to do two things in addition to the assigned problems: You must pledge the work and document any collaboration, as described in the assignment, and you must include a short essay commenting on anything you found noteworthy about it.

Attendance

Regular class attendance is strongly encouraged, and part of your grade is based on it. I am hoping to be able to record classes this semester so that if for whatever reason you can’t attend in person you can watch the recording. If that turns out to be impossible, then I will fall back on my pre-pandemic policy:

You can miss a week’s worth of class without penalty; after that, each unexcused1 absence reduces this part of your grade. If you must miss class for whatever reason, see the notes online for a summary of what you missed, including any announcements. It may also be helpful to check with a classmate for more about what we did in class.

Either way, I track attendance by asking you to complete a “minute essay” at the end of each class. This consists of one or more short questions, which I ask that you answer by e-mail (and if you don’t remember to do that you don’t get credit for attendance).

1 The University excuses absences in only a few circumstances, such as conflict with a religious holiday, or pandemic-related illness or quarantine.
Video-lecture quizzes

For this course, I’ll be using not the traditional lecture format but a more “flipped” style, in which most course material is presented via video lectures and class time is used to review and answer questions, and for more-interactive activities.

These lectures will be made available via Echo360 https://echo360.org. You should have access to a CSCI-1120 course there, and titles of videos to view will be listed as readings. To encourage students to watch these videos, each will end with a quiz — one or more short questions that you are to answer, by e-mail. Please send one e-mail for each week’s worth of quizzes, and please use a subject line including “video quiz” and the group number (e.g., “video quizzes group 1”).

To get full credit for a week’s quizzes, you must send me your answers for that week before the class for which the videos are part of the reading. Partial responses will get partial credit; late responses will get half as much credit as if they were on time.

E-mail

I frequently communicate important or useful course-related information by sending e-mail to the Trinity e-mail addresses of all registered students, almost always with a subject line that begins with the course number (e.g., “csci 1120”). I therefore strongly encourage you to keep up with your Trinity e-mail. If you find that these course-related messages get lost in your inbox, TMail allows setting up filters to put messages that match specified criteria into its equivalent of folders, and I encourage you to do that to help manage these messages.

Late and missed work

Unless otherwise stated for a particular assignment, assignments will be accepted up to one class period late, but no more, at a penalty of 10 percent off per working day. For homeworks only, this penalty will be waived if you submit a preliminary version of the assignment on time and a revised version no more than one class period later. It may also be waived or additional time allowed at the instructor’s discretion in cases of illness, conflict with a university-sponsored activity or religious holiday, or other circumstances beyond your control. To quote a retired colleague:

If you have unusual circumstances (as we all sometimes do), please discuss these with me as far in advance as possible.

“Unusual circumstances” potentially covers a lot of ground, so if you think it applies to you, ask and I will try to work with you. Be advised, however, that being too busy with other classes does not count as “unusual circumstances”.

(Note that late penalties for video quizzes are higher, though they too can be waived if appropriate.)

Academic integrity at Trinity

What Academic Affairs recommends that I say:

All students are covered by a policy that prohibits dishonesty in academic work. Under the Honor Code, a faculty member will (or a student may) report an alleged violation to the Academic Honor Council. It is the task of the Council to investigate, adjudicate, and assign a punishment within certain guidelines if a violation has been verified. Students are required to pledge all written work that is submitted for a grade: “On my honor,
I have neither given nor received any unauthorized assistance on this work” and their signature. The pledge may be abbreviated “pledged” with a signature.

You will be asked to do this explicitly on everything you turn in for this course. If this strikes you as burdensome and pointless, consider the following words, also from Academic Affairs:

Signing the pledge indicates that students have taken ownership of their intellectual property; like an artist signing a painting, the pledge signals pride in a job well done.

I like this perspective!

Collaboration and academic integrity in this course

Unless otherwise specified, all work submitted for a grade (homework assignments) must represent your own individual effort, except as discussed below. All submitted work will be considered pledged work.

For most assignments, getting help is allowed and even encouraged, but not to the point where the helper is providing answers you just transcribe. Similarly, discussion of homework assignments among students is allowed, but not to the point where detailed answers are being written collectively. If you are working with other students in a lab, seeing another student’s work may be unavoidable, as it may be if you’re working together via Zoom or Gather, but please do not share answers electronically in a way that would be make it too easy (and tempting) to just copy and paste. Specifically, please do not just mail each other whole code files.

For a few types of assignments (such as extra credit), the rules are stricter; these exceptional cases will be noted with individual assignments.

However you get answers, you should write or type them up yourself. More importantly, you should completely understand everything you turn in, and by turning it in you are implicitly saying that you do.

Graded papers and sample solutions (to homeworks) from previous semesters, for this course or other courses I teach, are strictly off limits. For most assignments I will post a sample solution after the due date; these solutions are also off limits. (Normally this isn’t an issue because of timing, but if for some reason you must turn in work very late, it could be.)

Answers that are identical beyond coincidence (either to another student’s work or to a sample solution) will be considered to be in violation of the Honor Code, and will result in appropriate action.

You will be asked to document any collaboration; details will be provided with assignments. If you are uncertain about whether a particular level of collaboration is acceptable, please ask for clarification.

5 Computer and other resources

As most of you know, the department maintains a network of computers to be used for coursework and research; it includes machines in the classrooms, machines in the other labs, and several server machines housed by ITS. Machines in the classrooms and labs are available for in-person use whenever the room is not in use for a class or other event; all are also available for remote use whenever the appropriate operating system is running. Server machines should be available all the time. In addition, ITS has recently added to its VDI system a Linux virtual desktop. More information about these computers can be found at my Web site about department computers. For this course I strongly encourage you to use these computers for any homework that requires use of particular tools, since they provide a reasonably standard environment with the needed tools.
already installed. To report problems with the computers or with your account, it’s probably best
to get in touch with me (by e-mail usually works best); if I can’t resolve the problem myself I’ll
pass it on to the appropriate person(s) in ITS.

Be advised that help is also available for this course from the department-sponsored ACM peer
tutoring. Specifics will be provided in class and/or by e-mail. I encourage you to make use of this
resource if you’re having difficulty in this course!

6 Course Google Drive folders

I will use Google Drive to share with the class information that should not go on my publicly-
accessible course Web site.

I also plan to use Google Drive as a platform for you to turn work in and for me to communicate
grade information to you. To do this, I will set up for each student an individually-shared folder.

7 More from Academic Affairs

Academic Affairs recommends that I tell you the following:

Title IX reporting

Text from Academic Affairs:

As a Responsible Employee who is committed to creating an environment where every
member of our community can thrive, I want to let you know that I am a Manda-
tory Reporter. What that means is that I am am required to report any instances
of sexual misconduct, including sexual harassment, non-consensual sexual intercourse,
non-consensual sexual contact, sexual exploitation, intimate partner violence, stalking,
and related retaliation that I am aware of to the Title IX Coordinator. So, if you share
information with me about any incidents that implicate the Sexual Misconduct or Anti-
Harassment Policies, I am required to report all information to the Title IX Coordinator
to make sure you have information about support resources and complaint resolution
options. My report does not initiate the complaint process, and you are in control over
how you choose to engage with our Title IX Coordinator. If you or someone you know
has experienced sexual misconduct, including sexual harassment, I encourage you to
share this information directly with the Title IX Coordinator or one of the individuals
who has been designated as a confidential resource on campus. The reporting form is
available is available here.

Academic support

Text from Academic Affairs:

Trinity faculty hold students to the highest academic standards, but we also know that
the very best students seek out help when necessary. The following resources are in
place to support your academic success:

- Career Services: major exploration, career guidance.
- Counseling Services: mental health concerns, mental health referrals.
- Quantitative Reasoning and Skills Center: quantitatively-demanding coursework.
- **Student Accessibility Services**: accommodations for a diagnosed disability.
- **Wellness Center**: nutrition, sleep, stress management.
- **Writing Center**: starting a paper, finding a thesis, drafting and editing.

I encourage you to take advantage of any that look useful! (Some are irrelevant for this course, but you might want them for other courses.)

**Electronic recordings of course instruction**

Text from Academic Affairs:

Please be aware that all classroom instruction, including student participation in classroom activities, is subject to recording and dissemination on the University’s secure course management system (T-Learn). The recordings will be made available only to students enrolled in the course to facilitate online learning and review. Students are expressly prohibited from capturing or copying classroom recordings by any means; violations will be subject to disciplinary action. Instructors who wish to use a recording outside of class must obtain the written consent of any students who are personally identifiable in the recording.

Any recordings I make for this class will be made available via Google Drive rather than T-Learn, but as far as I know this is deemed acceptably secure.
