

# CSCI 1312 (Introduction to Programming for Engineering), Fall 2018

## Homework 2

Credit: 30 points.

### 1 Reading

Be sure you have read (or at least skimmed) the assigned readings from chapters 2 and 3.

### 2 Programming Problems

Do the following programming problems. You will end up with at least one code file per problem. Submit your program source (and any other needed files) by sending mail to [bmassing@cs.trinity.edu](mailto:bmassing@cs.trinity.edu) with each file as an attachment. Please use a subject line that mentions the course and the assignment (e.g., “csci 1312 hw 2” or “CS1 hw 2”). You can develop your programs on any system that provides the needed functionality, but I will test them on one of the department’s Linux machines, so you should probably make sure they work in that environment before turning them in.

1. (15 points) Write a C program to convert a Fahrenheit temperature to Celsius. The rule for converting Fahrenheit temperature  $F$  to Celsius temperature  $C$  is

$$C = (5/9)(F - 32)$$

The program should ask the user for the Fahrenheit temperature and print the equivalent Celsius temperature. You can use integers or floating-point numbers for this problem. (Integers might be a little simpler since that’s what we’ve used in examples.)

*For this assignment only*, you do not need to do any kind of checking that what the user enters is actually numeric (integer or floating-point, depending on your code), since we haven’t yet talked about conditional execution. Just assume it is and do the required calculations.

2. (15 points) Write a C program that prompts the user for a number of seconds  $S$  ( $S$  should be a non-negative integer, but your program doesn’t need to check for that) and prints  $S$  in a more normal notation — years, days, hours, minutes, and seconds. For example, 100 seconds is 0 years, 0 days, 0 hours, 1 minute, and 40 seconds, while 100000000 seconds is 3 years, 62 days, 9 hours, 46 minutes, and 40 seconds). Assume 365 days in a year (not quite right but makes the calculations simpler). *For this assignment only*, you do not need to do any kind of checking that what the user enters is actually an integer and non-negative, since we haven’t yet talked about conditional execution. Just assume it is and do the required calculations.

### 3 Honor Code Statement

Include the Honor Code pledge or just the word “pledged”, plus *at least one of the following* about collaboration and help (as many as apply).<sup>1</sup> Text *in italics* is explanatory or something for you to

---

<sup>1</sup> Credit where credit is due: I based the wording of this list on a posting to a SIGCSE mailing list. SIGCSE is the ACM’s Special Interest Group on CS Education.

fill in. For programming assignments, this should go in the body of the e-mail or in a plain-text file `honor-code.txt` (no word-processor files please).

- This assignment is entirely my own work. (*Here, “entirely my own work” means that it’s your own work except for anything you got from the assignment itself — some programming assignments include “starter code”, for example — or from the course Web site. In particular, for programming assignments you can copy freely from anything on the “sample programs page”.*)
- I worked with *names of other students* on this assignment.
- I got help with this assignment from *source of help* — *ACM tutoring, another student in the course, the instructor, etc.* (*Here, “help” means significant help, beyond a little assistance with tools or compiler errors.*)
- I got help from *outside source* — *a book other than the textbook (give title and author), a Web site (give its URL), etc..* (*Here too, you only need to mention significant help — you don’t need to tell me that you looked up an error message on the Web, but if you found an algorithm or a code sketch, tell me about that.*)
- I provided help to *names of students* on this assignment. (*And here too, you only need to tell me about significant help.*)

## 4 Essay

Include a brief essay (a sentence or two is fine, though you can write as much as you like) telling me what about the assignment you found interesting, difficult, or otherwise noteworthy. For programming assignments, it should go in the body of the e-mail or in a plain-text file `essay.txt` (no word-processor files please).
