Slide 2

Project Presentations — What You Should Do

- Describe/explain the following (your choice how, but a PowerPoint-or-similar presentation seems most effective):
  - What problem you were asked to solve. (The other sophomores know. The rest of the audience doesn't.)
  - Your requirements analysis (use cases, with UML diagram, perhaps simpler than the ones you sent me).
  - Your implementation design (perhaps with some UML class diagrams).
- Demonstrate your prototype implementation.
