

Slide 1

### Administrivia

- Presentations next time in class.
- Code, final reports, and individual evaluations due — let's say first day of finals?

Slide 2

### Project Presentations — What You Should Do

- Describe/explain the following (your choice how, but a PowerPoint-or-similar presentation seems most effective):
  - (Usually I ask you to describe the problem you were asked to solve — the other sophomores know, but the rest of the audience doesn't. I will do five minutes' worth of this, so you don't have to.)
  - Your requirements analysis (use cases, with UML diagram, perhaps simpler than the ones you sent me).
  - Your implementation design (perhaps with some UML class diagrams).
- Demonstrate your prototype implementation.
- About 15 minutes total for each group.

## Minute Essay

- None — sign in.
