- (Update on my status.)
- Reminder: Reading Quiz 5 nominally due today. Accepted through Friday without penalty.
- Draft version of Homework 4 posted (?); to be due a week from Wednesday. Two problems I think will not be hard (leftovers from previous topic(s), plus assembly/link problem, still in work).
I'll do an example as part of the March 29 class.
When? ASAP, but might be end of the day tomorrow.

- No midterm — I think can be skipped without much effect on how much you learn, and it save everyone some time.
- I'm leaning toward having a final, mostly so part of your grade will depend on something that's your work only. Open book, open notes, untimed, so really more of a glorified problem set. Decision a bit later.
- A definite ray of hope in terms of what we can do in the time we have:
Last year we lost a week because of the abrupt decision to close the campus and go to online classes. With that and other things, this time last year we were only a little ahead of where we are now.

- I've put together a tentative plan for the rest of the semester. It doesn't say about homeworks, but I think there need to be four more — Homework 4, plus three more on later material, plus an optional one on Chapter 3.
(Review.)
- sHomework 4 (assembly and linking) to be posted ASAP. I'll do a relevant example as the March 29 class, also ASAP.
- Yes, I'm still way behind on grading, but I've made real progress on Homework 1, so soon? Sadly, this has not been a priority.
(Aside: One take-away message for me this semester: Maybe it's time to switch to a more mainstream infrastructure — TLearn?? Google Classroom?)
- Questions? Discussion?

Minute Essay

Slide 4

- My impression — though I haven't checked this — is that most of you are keeping up pretty well with recorded lectures and reading quizzes and even homework.
- If you're mostly caught up, how has the workload been? If you're not, are you willing and able to say what's slowing you down?
