Administrivia

- Remember that design presentations are scheduled for April 21 and that prototype code and final reports/evaluations are due April 28. You probably should plan to have your prototype in good enough shape to demo by April 21.

Slide 1

Presentation — What to Include

- A discussion of the problem, including use cases. Use-case diagrams are strongly recommended.

- A discussion of the design. Dr. Pitts will teach you a more formal model next year, including analysis and design diagrams. For now, anything that explains the overall structure of your proposed implementation is fine. If your design is object-oriented, a UML diagram showing major classes would be good. If you remember sequence diagrams from last year's P/E/D and think they would be helpful, include them.

- A demo of your prototype implementation.
