

# CSCI 3215 (Advanced UNIX Command-Line Tools), Fall 2022

## Reading Quiz 2

**Credit:** 5 points.

### 1 Reading

Be sure you have read, or at least skimmed, the reading for 9/14 and 9/19.

### 2 Instructions

For most courses I ask that you answer questions on reading quizzes using *only* the assigned readings for the course. For this course, however, while I mean for you to be able to answer the questions based on the assigned readings, plus sometimes `man` and `info` pages, you can consult any source you like. (So, Web searches are AOK.) It's okay to talk to classmates about this assignment as you usually do, *but* I want each person to at least skim all the reading. Include the Honor Code pledge in what you turn in, either the full pledge or just the word "pledged". For these quizzes by doing this you are also saying you have at least attempted or skimmed all the reading it covers.

Please put the pledge in the same document as your answers, so I don't overlook it, and please be sure to include your name somewhere in the file, so when I print it for grading I know whose work it is.

You may write out your answers by hand and scan them, or you may use a word processor or other program, but please submit PDF or plain text in the "turn-in" folder I have set up for you on Google Drive. (So, no word-processor files, including Google Docs, and no links to other Google Docs.)

### 3 Questions

1. (2.5 points) Why are filenames containing spaces a problem in `bash`? What are two ways pass one to a command, `space(s)` and `all`?
2. (2.5 points) In `bash`, how can you execute a command that's not in your search path? (There's more than one way.)
