My computer plugs into the wall where I can access internet connection. AT&T is the supplier.

The wiring goes through the port in the wall, then to the patch panel and the network data closet.

Trinity Network

The connection between Ruth Taylor, Halsell, and Cobb-Racey flows on fiber optic wiring. (Fiber optic cables are used between buildings, and Ethernet is used within the buildings).

My internet is provided by AT&T, my Y: drive and group folders are on by the tcc-tiger server. My email is provided by the ITS Harden.

= Fiber optic
