

# Show Your Code

2/5/2009

# Opening Discussion

- In class code.
- Minute essay comments
  - Semicolon after if statement.
  - Different actions for different people. Making them behave differently.
  - Once the person “enters the house”, can we move him to make him reappear?
  - What does null mean?
  - Can you accelerate motion if key is pressed harder?

# More Comments

- Getting multiple keys at once. Delay in `getKey()` because it returns most recently pressed key.
- Difference between `==` and `.equals()`.
- If we didn't do `"String key=Greenfoot.getKey()"` we would have to use `Greenfoot.getKey()` every place we used `key`.
- In two weeks we could make the person go to a house wherever it is.

# Show Your Code

- It is time for nine lucky people to show us their code.

# Playing with our Person

- Using the `isKeyDown(String key)` method.
- Having multiple people in the city.
- Trying to get a second “player”.

# Minute Essay

- Next week we will do loops. Is there anything you would like to see us start doing as an example?
- Remember that the second quiz is on Monday.
