

Show Your Code

2-5-2010

Opening Discussion

- In class code/following along/errors
- Minute essay comments
 - Which is better, `isKeyDown` or `keyPressed`?
 - Can you hold a key down and run the alligator off the world?
 - Can you control actors with the mouse?
 - Animating the alligator.
 - How does the computer read the English in a string?
 - Commenting out lines you don't want.

Show Your Code

- It is time for ten lucky people to show us their code.

Switch Statements

- If is not the only conditional statement in Java. The switch statement allows you to pick between multiple options, but you can only select on an integer.
- The Wombat scenario uses switch statements.
- `switch(intExpression) {`
 - `case #:`
 - `break;`
- `}`

Playing with our Person

- Making the alligator eat the person.
- Associating different people with different houses.

Minute Essay

- Next week we will do loops. Is there anything you would like to see us start doing as an example?
- Remember that the second quiz is on Monday.
