

Eclipse

12-2-2011

Opening Discussion

- Minute essay comments
 - Corner of dead.
 - Separation of interface from implementation.
 - Can you get viruses on cell phones?
- IcP solutions

Applications

- We have been playing with scripts. To make an application you put a main method in an object.
 - `def main(args:Array[String]):Unit = { ... }`
- Compile with `scalac` and run with `scala`. (Just give the object name, no `.scala`.)

Eclipse

- Applications typically aren't written with command-line tools. Instead we use an Integrated Development Environment, IDE.
- Eclipse is such a program.
 - Free download from eclipse.org.
 - Scala plug-in from scala-ide.org.
- It is installed on these machines. Let's have you run it.

Minute Essay

- Any last requests before the last class?
