

Concepts of Perl

10-24-2005

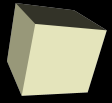

Opening Discussion

- What did we talk about last class?
- Do you have any questions about the reading?
- What aspects of the reading did you find most interesting?

- Write subroutines for finding some standard numeric stuff. Try sum, mean, and median first.
- Now do a mode. What is the best way to do mode in Perl?
- I want us to play with file access some. The Run dialog will let you specify command line arguments that could be read in using the `<>` operator. Make a file that has a name on a line followed by a number (like a phone number). Put in several entries. Now read that in and use a hash to look things up by name. Now look them up by number instead.

Reminders

- Next class we have a quiz and assignment #6 is due that day.
