# Multimodeling Examples

4-7-2005

Opening Discussion

- What did we talk about last class?

Code

- We can likely finish off our lid code today. There are bugs in what we wrote yesterday. I might normally skip doing this in class, but debugging is a very critical skill that I find is often lacking.

Examples

- I want you, as a class, to develop some multimodels of the following systems. In approaching the multimodel consider refinements of elements of abstract models.
  - Two jug system
  - Boiling water

Minute Essay

- What will you do doing next Tuesday during this class time?
