

Closing Remarks

4-29-2011

Opening Discussion

- Do you have any questions about your project?
- Do you have any questions about the test?

Spatial Trees

- There was a minute essay question on how we can use trees to find neighbor points.
- There are many types of spatial trees, but the simplest to draw and understand is probably the quadtree.

Course Evals

- It is time to do course evaluations. We are doing them electronically so there aren't any forms to carry down the hall, but someone should read the instructions.

Minute Essay

- Remember to show up for the project presentation. If you have questions send me e-mail and we can probably find a time to get together.
- Also send me your test report by tonight.
